R	FR0013305190	Capitalisation	EUR	None	None	EUR 150.00	Financial intermediaries (including distributors and platforms) which: have different arrangements with their clients for the provision of investment services in connection with the fund; and are not entitled (under their applicable laws and regulations) to receive duties, fees and other monetary benefits from the Management Company in connection with the provision of the above-mentioned investment services.	see risk profile
Z	FR0013245081	Capitalisation	EUR	None	None	EUR 1,000.00	UCIs approved by the Management Company and managed by an entity of the Candriam Group.	see risk profile

(*) The minimum initial subscription amount will not apply to the Management Company, to Candriam Group entities or funds managed by Group entities.

Management objective

Within the context of systematic investment, the fund's objective is to achieve an absolute performance net of all management fees exceeding the capitalised €STR index for euro denominated units, exceeding the capitalised SONIA index for GBP denominated units, exceeding the capitalised EFFR index for USD denominated units, exceeding the capitalised SONIA index for USD denominated units, and exceeding the capitalised SARON index for CHF denominated units, independent of trends on the international equities, interest rates, currencies and volatility markets by means of systematic quantitative strategies with an annualised target volatility of less than 12% under normal market conditions.

Benchmark index

The fund is actively managed and the investment approach implies a reference to an index. The benchmark used does not explicitly take sustainability criteria into account.

- Capitalised €STR
- Capitalised SONIA (Sterling Overnight Index Average)
- Capitalised Effective Federal Funds Rate – EFFR or Fed Fund
- Capitalised SARON

€STR: represents the short term rate in euros that reflects unsecured overnight borrowing costs in euros for banks in the euro zone.

SONIA: the average of the interest rates that banks pay to borrow sterling overnight from other financial institutions.

Effective Federal Funds Rate (Interest Rate) - EFFR: the interest rate at which depository institutions lend reserve balances (USD amounts held at Federal Reserve Banks) to each other overnight.

SARON: represents the overnight interest rate of the secured funding market in Swiss francs (CHF).

In determining risk levels / risk parameters:

- To compare performance,
- To calculate the outperformance fee for some categories of units.

The €STR index is provided by European Money Markets Institute, which is an entity registered with ESMA in accordance with Article 34 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds and amending Directives 2008/48/EC and 2014/17/EU and Regulation (EU) No 596/2014.

It is available from <https://www.emmi-benchmarks.eu>.

The SONIA is provided by the Bank of England

It is available from <https://www.bankofengland.co.uk/markets/benchmarks>

The EFFR index is provided by the Federal Reserve Bank of New York (New York Fed)

It is available from: <https://apps.newyorkfed.org/markets/autorates/fed%20funds>

The Saron index is provided by SIX Financial Market Supervisory Authority, which is an entity registered with ESMA in accordance with Article 33 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds and amending Directives 2008/48/EC and 2014/17/EU and Regulation (EU) No 596/2014.

It is available from <https://www.six-group.com/en/products-services/the-swiss-stock-exchange/market-data/indices/swiss-reference-rates.html>

The Management Company has adopted robust written plans to cover the cases where the publication of the benchmark index has been stopped or where major changes in that benchmark have occurred. The Management Company, based on these plans, may choose another benchmark, if appropriate. Any such change of benchmark will be reflected in an updated prospectus. Such plans are available upon request at the registered office of the Management Company.

Investment strategy

This fund does not particularly take into account an analysis of ESG aspects, and more precisely it does not have sustainable investment as its objective and does not specifically promote environmental and/or social characteristics, as described in the SFDR Regulation.

The fund does not systematically take into account the principal adverse impacts on sustainability for one or more of the following reasons:

- All or some of the issuing companies do not provide sufficient PAI data,
- The PAI element is not considered to be a predominant element in the fund's investment process,
- The fund uses derivative products for which the processing of PAI elements has not yet been defined and standardised".
- The underlying funds might not take account of the principal adverse impacts on sustainability factors as defined by the Management Company.

Alignment with the Taxonomy

For the funds which do not have sustainable investment as their objective and which do not specifically promote environmental and/or social characteristics, the investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For more details please see the transparency code on the Management Company's website:

<https://www.candriam.com/en/private/market-insights/sri-publications/#transparency>

The fund has exposure to systematic strategies on the world futures markets:

Strategies used

The portfolio is managed based on two focal points:

- Dynamic strategy,
- Portfolio fund management strategy.

1. Dynamic strategy: systematic management

a) Description of the strategy

The rules governing the positions taken and their neutralisation methods are established in advance. Inputting these rules into a computer system translates them into market action signals.

The strategies stem from permanent research conducted by Candriam Group. Integrating a strategy is determined by its correlation with the existing models and its capacity to generate a return over the recommended investment period.

There are currently three types of strategies:

- The principal strategy, called trend following, consists of exploiting the directionality of the markets.
- Two diversifying strategies:
 - o The contrasting approach, which uses the return properties at the market average.
 - o Form recognition which runs a statistical analysis of the markets.

The trend-following strategy remains the main performance driver, while the current or any future diversifying strategies aim to generate a performance with low correlation to that of the main strategy, thereby improving the risk/ yield pairing and limiting drawdowns (cumulative losses). A new strategy will be implemented if it has a low correlation to the existing strategies and has positive yield prospects.

b) Diversified investment universe

A diversification in investments in terms of asset classes will be carried out with an exposure notably to:

- equities indices,
- volatility indices,
- short rates,
- long rates,
- currencies.

c) Managed risk framework

The system for allocating positions between the various markets is based on the principle of risk diversification found on each of the futures contracts. This risk is understood by calculating the volatility of each contract and includes the concept of liquidity.

The investment decisions made for this fund do not consistently include sustainability risks in the selection of assets. Nevertheless, sustainability risks may be considered on a discretionary basis when a financial instrument is selected or sold.

The investment strategy is based on the use of index derivatives, and at present such instruments do not allow the principal negative repercussions on sustainability as identified by the Management Company to be hedged with sufficient depth. In this context, negative repercussions on sustainability are therefore not taken into account in investment decisions.

Portfolio fund strategy

The strategy consists of constructing a diversified portfolio invested in securities issued by private issuers (corporate debt and securities issued by financial institutions), government bonds and other French and foreign money market instruments with a short-term rating of at least A-2, when acquired, (or equivalent) by a ratings agency or considered to be of equivalent quality by the Management Company (in particular if there is no rating).

The fund may also make use of efficient portfolio management techniques as described below.

This part of the portfolio will represent between 0 and 100% of the fund's net assets.

Instruments used

In order to achieve its investment objective and implement its strategy, the fund invests essentially in the following financial instruments:

1. Equities

None.

2. Debt securities and money market instruments (between 0 and 100%)

Within the context of managing its cash, the fund may invest in debt securities and money market instruments. These are mainly bonds and negotiable debt securities, including commercial paper, of all types of issuers with a short-term rating of at least A-2 when acquired (or equivalent) from one of the ratings agencies or considered to be of equivalent quality by the Management Company (in particular if there is no rating). This part of the portfolio is between 0 and 100%.

3. Shares or units in UCIs (between 0 and 10%)

In accordance with the applicable laws, the fund may invest up to 10% of its assets in:

- Units or shares in European UCITS which do not hold more than 10% of UCI units,
- Units or shares of European AIFs or foreign investment funds which do not hold more than 10% of UCI units or of foreign investment funds and which meet the three other criteria of the Code monétaire et financier.

The UCIs will be managed directly by Candriam or by an external Management Company and may be of any type.

Investment will be for the purpose of diversifying the portfolio and optimising performance.

4. Other assets (between 0 and 10%)

The fund may invest up to 10% of its assets in eligible financial securities or money market instruments not traded on a regulated market.

5. Derivative financial instruments (limited by the VaR of the fund)

Type of derivative instruments

The fund will invest in derivative instruments: forward contracts traded on regulated markets (through futures, options and forward foreign exchange) and notably on the following categories of futures markets: short-term interest rates, medium and long-term government bonds, stock exchange indices, currencies).

The fund may also make use of total return swaps, CDSs (credit default swaps) and credit derivative indices or other derivative financial instruments which have the same characteristics, for example contracts for difference, for the purpose of (long or short) exposure, hedging or arbitrage.

The underlying instruments to these operations may be either individual securities, financial indices (equities, interest rates, currencies, volatility, credit, etc.) in which the fund may invest in accordance with its investment objectives.

These derivatives may be traded on regulated or over-the-counter markets.

Authorised counterparties.

In over-the-counter operations, counterparties to these transactions are approved by the Management Company's risk management department and, when the transactions are initiated, have a minimum rating of BBB-/Baa3 from at least one recognised ratings agency or considered to be of equivalent quality by the Management Company (in particular if there is no rating). The counterparties are located in an OECD member country.

Additional information on the one or more counterparties to the transactions is contained in the fund's annual report.

Financial collateral:

See section 10 – "Management of financial collateral for OTC derivative products and efficient portfolio management techniques" below

6. Instruments with embedded derivatives (max. 100%)

The fund may also use ETNs (Exchange Traded Notes) in commodities index futures and ETCs (Exchange Traded Commodities), which are debt securities traded on a regulated market.

It may hold callable and/or puttable bonds, and more generally any financial instrument containing a financial contract.

7. Deposits (between 0 and 100%)

The manager may make use of cash deposits, up to 100% of the assets, in order to manage its cash flow.

8. Cash borrowing (between 0 and 10%)

The fund may temporarily register a debit balance as a result of transactions related to cash flow (investments and divestments in progress, subscription/redemption and purchase/sale transactions, etc.), within a limit of 10% of the assets.

9. Efficient portfolio management technique

In order to increase its yield and/or reduce its risks, the fund is authorised to make use of the following efficient portfolio management techniques covering transferable securities and money market instruments:

- Reverse repurchase agreements (reverse repo)

The fund may enter into reverse repurchase transactions for which on maturity the seller (counterparty) is required to take back the asset contained in the repurchase agreement and the fund is required to return the asset contained in the reverse repurchase agreement.

Such transactions may relate to 100% of the net assets. The proportion is normally expected to vary between 50% and 100%.

For the term of the reverse repurchase agreement, the fund may not sell or use the securities which are contained in this agreement as a pledge/collateral unless the fund has other means of coverage.

- Repurchase agreements (repo)

The fund may enter into repurchase transactions for which on maturity the fund is required to reacquire the asset contained in the repurchase agreement and the seller (counterparty) is required to return the asset contained in the reverse repurchase agreement.

To meet temporary liquidity needs, such transactions may relate to 10% of the net assets. The proportion is normally expected to vary between 0 and 10%.

The fund must, on expiration of the term of the repurchase agreement, have the necessary assets to pay the agreed return price to the fund.

The use of these transactions must not result in a change in its investment objectives or result in additional risks being taken which exceed its risk profile as defined in the prospectus.

1. Associated risks and measures to restrict them.

The risks associated with efficient portfolio management techniques (including collateral management) are identified, managed and restricted by the risk management process. The principal risks are counterparty risk, delivery risk, operational risk, legal risk, custody risk and conflict of interest risk (as defined in the article entitled Risk factors), and such risks are mitigated by the organisation and the procedures defined by the Management Company as follows:

Selection of counterparties and legal framework

Counterparties to these transactions are approved by the Management Company's risk management department and, when the transactions are initiated, have a minimum rating of BBB-/Baa3 from at least one recognised ratings agency or are considered to be of equivalent quality by the Management Company. These counterparties are entities which are subject to prudential supervision. The counterparties are located in an OECD member country. Each counterparty is bound by a contract the clauses of which have been validated by the legal department/risk management department.

Financial collateral

See section 10 – "Management of financial collateral for OTC derivative products and efficient portfolio management techniques" below

Restrictions on reinvestment of financial collateral received

See point 10 entitled "Management of financial guarantees for OTC derivative products and efficient portfolio management techniques" below

Measures taken to reduce the risk of conflicts of interest

To measure the risk of a conflict of interest, the Management Company has established a process for selecting and monitoring counterparties through committees organised by the risk management department. In addition, the remuneration of these transactions is in line with market practices in order to avoid any conflict of interest,

Remuneration policy for reverse repurchase agreements (reverse repo)

Income from reverse repurchase agreements (reverse repo) is paid in full to the fund.

Remuneration policy for repurchase agreements

This activity does not generate income.

Periodic investor information

Further information on the conditions of application of these efficient portfolio management techniques is contained in the annual and semi-annual reports.

10. Management of financial collateral for OTC derivative products and efficient portfolio management techniques

Some over-the-counter transactions in financial instruments are covered by a collateralisation policy that has been validated by the risk management department.

a) General criteria

All collateral to reduce exposure to counterparty risk satisfies the following criteria:

- Liquidity

Any collateral received in a form other than cash must have a strong level of liquidity and be traded on a regulated market or within the framework of a multilateral trading system making use of transparent price setting methods such that it can be quickly sold at a price close to the valuation prior to the sale.

- Valuation

The collateral received will be valued on a daily basis and assets with highly volatile prices will only be accepted as collateral if sufficiently prudent safety margins are in place.

- Quality of issuer credit

See point b below.

- Correlation

the financial collateral received must be issued by an entity which is independent of the counterparty and does not have a strong correlation with the counterparty's performance.

- Diversification

The financial collateral must be sufficiently diversified in terms of the countries, markets and issuers (at net asset value level). As regards issuer diversity, the maximum exposure to an issuer through the collateral received must not exceed 20% of the net assets of the respective fund. However, this limit is raised to 100% for securities issued or guaranteed by a member state of the European Economic Area (EEA), by its local authorities or by public international bodies to which one or more member states of the EEA belong. These issuers must be highly rated (in other words rated at least BBB-/Baa3 by a recognised ratings agency or regarded as such by the Management Company). If the fund exercises this latter option, it must hold securities belonging to at least six different issues, with securities belonging to the same issue not exceeding 30% of the total amount of the net assets.

The management risks connected with collateral, such as operational and legal risks, must be identified, managed and mitigated by the risk management process.

The collateral received may be fully mobilised at any time without reference thereto to the counterparty or the need to obtain its agreement.

b) Types of authorised collateral

The permitted types of financial collateral are as follows:

- Cash denominated in the reference currency of the fund/affected fund,
- Highly rated debt securities (rated at least BBB-/Baa3 or equivalent by one of the ratings agencies) issued by public sector issuers from an OECD country (governments, supranational bodies, etc.) and of a minimum issue size of EUR 250 million, and a maximum residual maturity of 25 years,
- Highly rated debt securities (rated at least BBB-/Baa3 or equivalent by one of the ratings agencies) issued by private sector issuers from an OECD country and of a minimum issue size of EUR 250 million, and a maximum residual maturity of 10 years,
- Equities listed or traded on a regulated market of a member state of the European Union or on a stock exchange of a state which is a member of the OECD provided the equities are included in a significant index,
- Shares or units in undertakings for collective investment offering adequate liquidity and investing in money market instruments, highly rated bonds or shares that meet the conditions stated above.

The risk management department of the Management Company may impose stricter criteria in terms of the collateral received and thereby exclude certain types of instruments, certain countries, certain issuers or certain securities.

In the event of materialisation of the counterparty risk, the fund could end up owning the financial collateral received. If the fund may dispose of such collateral at a value corresponding to the value of the loan/assets transferred, it would not bear negative financial consequences. Otherwise (if the value of assets received as collateral fell below the value of the assets loaned/transferred before they could be sold), it would incur a loss equal to the difference between the value of the assets loaned/transferred and the value of the collateral once it is liquidated.

c) Level of financial collateral received

The level of collateral required for over-the-counter financial instruments and efficient portfolio management techniques is determined by the agreements reached with each of the counterparties taking account, as applicable, of factors such as the nature and the characteristics of the transactions, the quality of credit and of the counterparties, as well as market conditions at the time. The counterparty's exposure which is not covered by collateral will at all times remain below the counterparty risk limits fixed by the regulations.

d) Discounting policy

The Management Company has put in place a discounting policy suited to each category of assets (depending on the credit quality in particular) received as financial collateral. This policy can be obtained by investors free of charge from the Management Company's registered office.

e) Restrictions on reinvestment of financial collateral received

Non-cash financial collateral may not be sold or reinvested or pledged.

Financial collateral received in cash can only be deposited with counterparties meeting the above eligibility criteria, invested in highly rated government loans, used for the purpose of reverse repurchase transactions that can be recalled at any time and/or invested in short-term monetary funds, in accordance with the applicable diversification criteria.

Although invested in assets with a low degree of risk, investments may nevertheless include a limited financial risk.

f) Safekeeping of collateral

In the event of transfer of ownership, the collateral received will be held by the depositary bank. In other types of collateral agreement, the collateral may be held by an external depositary subject to prudential supervision which is not connected to the supplier of the financial collateral.

The collateral received may be fully mobilised at any time without reference thereto to the counterparty or the need to obtain its agreement.

g) Financial collateral in favour of the counterparty

Certain derivatives may initially require collateral to be lodged in favour of the counterparty (cash and/or securities).

11. Valuation

Reverse repurchase and repurchase agreements

Reverse repurchase and repurchase agreements are valued at cost plus interest. For contracts exceeding three months, the credit spread of the counterparty may be revalued.

Collateral

Collateral received is valued daily by the Management Company and/or the collateral agent.

Collateral provided is valued daily by the Management Company and/or the collateral agent.

Table of derivative instruments

	TYPE OF MARKET		TYPE OF RISK					TYPE OF USE	
	Regulated markets and/or	OTC markets	Equities	Interest rates	Foreign exchange	Credit	Other risk(s)	Hedging	Exposure

Credit default swaps		x				x		x	x
Credit derivative indices		x				x		x	x
Total Return Swap		x				x		x	x

Risk profile

Your money will be mainly invested in financial instruments selected by the Management Company. These instruments will be subject to market trends and uncertainties.

Within the scope of its management strategy, the portfolio will be primarily invested on the futures markets by means notably of futures contracts on equity indices, interest rates, currencies, volatility, which give rise to the undermentioned risks. These risks are characterised, among other things, by the fact that the initial investment (initial margin) is far lower than the nominal contract amount, thereby generating a leverage effect.

The fund may be exposed to the following principal types of risk:

Risk of capital loss

There is no guarantee for investors relating to the capital invested, and investors may not receive back the full amount invested.

Equity risk

The fund may be exposed to equity market risk through direct investment (through transferable securities and/or derivative products). These investments, which generate long or short exposure, may entail a risk of substantial losses. A variation in the equity market in the reverse direction to the positions can lead to the risk of losses and may cause the net asset value of the fund to fall.

Interest rate risk

A change in interest rates, resulting notably from inflation, may cause a risk of losses and reduce the net asset value of the fund (particularly in the event of a rate increase if the fund has a positive rate sensitivity and in the event of a rate decline if the fund has a negative rate sensitivity). Long term bonds (and related derivatives) are more sensitive to interest rate variations.

A change in inflation, in other words a general rise or fall in the cost of living, is one of the factors potentially affecting interest rates and consequently the NAV.

Foreign exchange risk

Foreign exchange risk derives from the fund's direct investments and its investments in forward financial instruments, resulting in exposure to a currency other than its valuation currency. Changes in the exchange rate of this currency in relation to that of the fund may negatively affect the value of assets in the portfolio.

Risk associated with derivative financial instruments

Financial derivatives are instruments whose value depends on (or is derived from) one or more underlying financial assets (equities, interest rates, bonds, currencies, etc.). The use of derivatives therefore involves the risk associated with the underlying instruments. They may be used for purposes of exposure or hedging against the underlying assets. Depending on the strategies employed, the use of derivative financial instruments can also entail leverage risks (amplifying downward market movements). In a hedging strategy, the derivative financial instruments may, under certain market conditions, not be perfectly correlated to the assets to be hedged. With options, an unfavourable fluctuation in the price of the underlying assets could cause the fund to lose all of the premiums paid. OTC financial derivatives also entail a counterparty risk (though this may be attenuated by the assets received as collateral) and may involve a valuation risk or a liquidity risk (difficulty selling or closing open positions).

Model risk

The management process relies on establishing a model which is used to identify signals based on past statistical results. There is a risk that the model is inefficient and that the strategies used will produce a poor performance. There is no guarantee that past market situations will be reproduced in the future.

Risk arising from discretionary management and the arbitrage strategy

The fund aims to generate performance from exposure to various markets according to the asset manager's convictions based on technical and financial indicators. The interpretation of these indicators and the predictions of the asset manager may be wrong and cause the fund to underperform its investment objective. Arbitrage is a technique which consists in benefiting from the differences in prices recorded (or anticipated) between markets and/or sectors and/or securities and/or currencies and/or instruments. If such arbitrage transactions perform unfavourably (a rise in short transactions and/or fall in long transactions), the fund's net asset value may fall.

Volatility risk

The fund may be exposed (taking directional positions or using arbitrage strategies for example) to market volatility risk and could therefore, based on its exposure, suffer losses in the event of changes in the volatility level of these markets.

Emerging countries risk

Market movements can be stronger and faster on these markets than on the developed markets, which could cause the net asset value to fall in the event of adverse movements in relation to the positions taken. Volatility may be caused by a global market risk or may be triggered by the vicissitudes of a single security. Sectoral concentration risks may also be prevalent on some emerging markets. These risks may also heighten the volatility. Emerging countries may experience serious political, social, legal and fiscal uncertainties or other events that could have a negative impact on the sub-funds investing in them. In addition, local depositary and sub-custodial services remain underdeveloped in non-OECD countries and emerging countries, and transactions carried out in these markets are subject to transaction risk and custody risk. In some cases, the fund may be unable to recover all or part of its assets or may be exposed to delays in delivery when recovering its assets.

Leverage risk

Compared with other types of investment, the fund may operate with a high level of leverage. Use of leverage may entail high volatility and the fund may suffer higher losses depending on the leverage level.

Counterparty risk

The fund may use OTC derivative products and/or efficient portfolio management techniques. These transactions may cause a counterparty risk i.e. losses incurred in connection with commitments contracted with a defaulting counterparty.

Credit risk

Risk that an issuer or a counterparty will default. This risk includes the risk of changes in credit spreads and default risk. The fund may be exposed to the credit market and/or specific issuers in particular whose prices will change based on the expectations of the market as regards their ability to repay their debt. The fund may also be exposed the risk that a selected issuer will default, i.e. will be unable to honour its debt repayment, in the form of coupons and/or principal. Depending on whether the fund is positively or negatively positioned on the credit market and/or some issuers in particular, an upward or downward movement respectively of the credit spreads, or a default, may negatively impact the net asset value.

Delivery risk

The fund may want to liquidate assets which at that time are subject to a transaction with a counterparty. In this case, the fund would recall these assets from the counterparty. Delivery risk is the risk that the counterparty, although contractually obliged, may not be able in operational terms to return the assets quickly enough to allow the fund to honour the sale of these instruments on the market.

Operational risk

The operational risk is the risk of direct or indirect losses associated with a number of factors (such as human error, fraud and malice, IT system failures and external events, etc.) which may have an impact upon the fund and/or the investors. The Management Company aims to reduce these risks by putting in place controls and procedures.

Legal risk

The risk of litigation of all kinds with a counterparty or a third party. The Management Company aims to reduce these risks by putting in place controls and procedures.

Custody risk

The risk of loss of assets held by a depositary as a result of insolvency, negligence or fraudulent action by the depositary or a sub-custodian. This risk is mitigated by the regulatory requirements governing depositary services.

Risk of conflicts of interest

Selection of a counterparty based on reasons other than the sole interest of the fund and/or unequal treatment in the management of similar portfolios could be the main sources of conflicts of interest.

Risk of changes to the benchmark index by the index provider

Unitholders should note that the benchmark index provider has full discretion to determine and therefore alter the characteristics of the relevant benchmark index for which it acts as sponsor. Under the terms of the licence contract, an index provider may not be required to give licence holders using the relevant benchmark index sufficient notice of changes to the benchmark index. As a result, the Management Company may not be able to inform fund unitholders in advance of changes made by the index provider to the characteristics of the relevant benchmark index.

Sustainability risk

The sustainability risk refers to any environmental, social or governance-related event or situation that might affect the performance and/or reputation of issuers in the portfolio.

Sustainability risks may be subdivided into three categories:

- Environmental: environmental events may create physical risks for the companies in the portfolio. For example, such events could arise from the consequences of climate change, loss of biodiversity, changes in ocean chemistry, etc. Apart from these physical risks, the companies could be negatively impacted by steps taken by governments to address environmental risks (such as a carbon tax). These mitigation risks could affect companies depending on their exposure to the above risks and how well they adapt to them,
- Social: refers to the risk factors linked to human capital, the supply chain and the way companies manage their impact on society. Issues around gender equality, remuneration policies, health and safety and the risks associated with working conditions in general all fall within the social dimension. The social dimension also includes risks of violation of human rights or labour rights in the supply chain.
- Governance: These aspects are linked to governance structures, for example the independence of the board of directors, management structures, labour relations, remuneration and compliance, or tax practices. The thing that governance risks have in common is that they are due to inadequate oversight of the company and/or the lack of incentive for the company to move towards higher governance standards.

The sustainability risk may be specific to the issuer, depending on its activities and practices, but may also be due to external factors. If an unforeseen event occurs in a specific issuer such as a strike or more generally an environmental disaster, the event could have a negative impact on portfolio performance. In addition, issuers which adapt their activities and/or policies may be less exposed to the sustainability risk.

Possible mitigation measures to manage risk exposure include the following:

- Exclusion of controversial activities or issuers
- Exclusion of issuers based on sustainability criteria,
- Inclusion of sustainability risks when issuers are selected or given weightings in the portfolio
- Engagement and sound management of the issuers.

Where applicable, these mitigation measures are described in the section in the prospectus describing the investment policy of the fund.

Changes affecting the UCI

Changes made	Date of change
Changes to the prospectus	31 October 2024

Management report

Economic and financial environment

In the first half of 2024, the advanced indicators and labour market indicators in the United States continued to point towards relatively strong growth. Unlike the end of 2023, there was no mention of a recession. Falling long rates at the end of 2023 drove down mortgage rates, delivering a boost to the residential real estate sector and supporting growth in Q1 2024. In January, fourth quarter GDP growth was 0.8% quarter-on-quarter. The ISM manufacturing index rose above 50 in March. The service-sector ISM hovered around 52.5. On average over the first quarter, 267,000 new jobs were created. The unemployment rate was around 3.8%. Salary growth slowed down in line with previous changes in the voluntary resignation rate. When the Federal Reserve met in March, the FOMC stuck to its forecast of three 25 basis point reductions in 2024. The number of reductions forecast for 2025 went down by one, leaving three reductions forecast. As it turned out, inflation fell more slowly, partly due to the increasing price of oil – the WTI ended the quarter at 84 dollars compared to 72 at the end of 2023 – but also because of the unrelenting increase in the price of services. Overall, the ten-year rate closed out the quarter at 4.21% up 34 basis points over the start of the year. The stock exchange was up 10.2% on Q1 2024 thanks to a buoyant economic environment.

Growth was showing signs of slowing as the second quarter progressed. The quarterly averages of the ISM indices (manufacturing and services) were 48.8 and 50.6 respectively. More than 147,000 new jobs were created. Despite this slowing trend, it was an eventful quarter for ten-year rates, explained mainly by two factors. First, data showing that more than 300,000 jobs were created in March was published, making people wonder if the slowdown was really coming. And second, despite first quarter GDP growth of 0.4% quarter-on-quarter, the GDP deflator (i.e. all prices in the economy) was up strongly. These two factors caused the market to doubt that the three expected rate cuts for 2024 would materialise, sending the ten-year rate higher. The relative weakness of the job creation data for May and June relieved some pressure on interest rates. Overall, the ten-year rate closed out the quarter at 4.37%, up 17 basis points over the end of March. The stock exchange gained 3.9% on Q2, closing at 5460 thanks to a buoyant economic environment and the continuing lure of artificial intelligence.

The third quarter was characterised by a significant fall in ten-year rates up to mid-September in response to more explicit fears of a slowdown in the US economy. In fact, job creation in the third quarter was around 159,000 on average. On 31 July, the Bank of Japan raised its key rate 15 basis points to 0.25% and decided to slow down its rate of bond purchases, and this, combined with weak United States job creation data, prompted the Japanese stock market to fall by more than 12% in a single day, Monday 5 August. In the afternoon of 5 August in Europe, however, the services ISM climbed back above 50%. This helped the Japanese stock exchange to grow by about 10% in a single day. The same epiphenomenon affected the US stock exchange but to a lesser degree. On 18 September, as announced at the previous meeting, the Federal Reserve raised its key rate 50 basis points to 5%. The service-sector ISM picked up again at the end of the quarter. Overall, after touching 3.62% in mid-September, the ten-year rate closed out the quarter at 3.78%, down 59 basis points over the end of June. The stock exchange gained 5.5% on Q3, closing at 5762 thanks to a positive economic environment – with GDP growing by 0.7% and 0.8% in the second and third quarters respectively – and the interest rate trends.

In the fourth quarter, the manufacturing-sector ISM moved towards the 50 mark although it did not cross it. The service-sector index averaged 54.1. Job creation was weaker in October due to strikes and hurricanes. In November, on the other hand, the picture for job creation looked much better (+227,000). Inflation stopped falling for several months, as did underlying inflation. The respective percentages were 2.75% and 3.3%. Even so, the Federal Reserve was still confident about the outlook for inflation. The ECB lowered its key rate by 25 basis points in two stages (in November and December), ending the year at 4.25%. In spite of the Fed's key rate reduction, the increasing likelihood of a Trump victory from mid-September and his election victory on 5 November pushed the ten-year rate up sharply. Indeed, his campaign pledges to increase customs duties, reduce taxes and deregulate were other factors potentially driving up inflation. In this environment, the ten-year rate gained 79 bps over the quarter and 70 bps in 2024 as a whole. Despite the large rate increase during the quarter, the stock market went up by 2.1% over the quarter and 23.3% in 2024 as a whole. The S&P500 closed the year at 5882 after briefly crossing the 6000 mark.

In the euro zone in Q1 2024, even with renovation premiums (partly financed by NextGen EU) cushioning the decline in residential investment, the level of (mortgage) rates was still weighing on the demand for (mortgage) loans and on investment. In terms of activity, the manufacturing PMI hovered around 46.4, although this figure masked big differences between the big four euro zone countries: it was over 50 in Spain but in Germany it kept on falling (41.9 in March). The service-sector PMI, on the other hand, recovered and climbed above 50 again. Of the big four countries,

France is the one exception. Job creation continued to increase, and the unemployment rate stayed at a historically low level (6.5% in March). According to the European Commission's survey of companies, their expectation was that appointments would continue to increase by around 1% annually. The European Central Bank (ECB) announced that rates would fall in June or July, economic data permitting. Overall, in parallel with the American rate trends, the German ten-year rate closed out the quarter at 2.27% up 27 basis points over the start of the year. The stock exchange was up 9.9% on Q1 2024 thanks to a slightly improved economic environment.

After 0.3% growth in the first quarter (a big increase in GDP compared to Q3 2022), the composite PMI index stabilised above 50 as the second quarter of 2024 progressed. The labour market remained buoyant. The unemployment rate fell to 6.4% in June. Credit terms of businesses and households stopped deteriorating and even improved as banks anticipated greater demand for credit in the forthcoming quarter. Inflation and underlying inflation were 2.5% and 2.9%, respectively (in June). But inflation stopped falling for several months. The main reason for this was the downward rigidity of inflation in services, which depends to a greater extent on what happens with salaries. And salaries were still rising quite quickly. Even so, the ECB lowered its key rate as promised by 25 basis points to 4.25% on 6 June. On 9 June in the wake of the results of the European elections, the French president dissolved the National Assembly. This decision was the start of a period of uncertainty, as reflected in a higher French ten-year rate and a larger spread to the German rate. In the end, the German ten-year rate ended the quarter at 2.46%, or 18 basis points up compared to the end of March. The stock market fell by 3.4% over the second quarter of 2024.

As the third quarter progressed, following publication of disappointing US employment data in July, the German ten-year rate started a decline lasting until the start of August. The lacklustre growth (+0.2% quarter-by-quarter in Q2) clearly reinforced this trend. Germany in particular (27% of the euro zone) experienced sluggish growth. Ever since the start of 2022, the country oscillated between periods of growth and contraction on a quarterly basis. There are several reasons that explain this sluggishness. In Germany, industry accounts for 20% of GDP, compared to 14% in the euro zone and 10% in the United States. The weighting of sectors played a big part, too: the importance of the auto sector (impacted by the new WLPT standard and competition from non-European electric vehicles) and the chemical sector (impacted by high gas prices following the war in Ukraine). There is also a geographical aspect: exposure to China where growth is slowing. Against this backdrop the ECB reduced its deposit facility rate by 25 basis points to 3.5% on 12 September. As announced in March 2024, the spread between the deposit facility rate and the central rate (on the main refinancing operations (MRO)) was reduced to 15 basis points. That put the MRO rate at 3.65%. The spread between the MRO rate and the lending facility rate, on the other hand, stayed the same at 25 basis points. Overall, the German ten-year rate closed out the quarter at 2.06%, down 40 basis points over the end of June. The stock exchange was up 2.9% on the quarter thanks to the interest rate trends. It is striking that despite these mixed indicators, third-quarter GDP grew by 0.4% thanks partly to household consumption (+0.7%) supported by lower inflation and a continuing and quite significant increase in household disposable income.

Even though the unemployment rate continued to decline (6.3% in October), the labour market started to ease more markedly in the fourth quarter. And despite euro zone inflation crossing the 2% threshold in September to its lowest level (1.7%) since April 2021, news of a significant increase in German inflation for October (from 1.8 to 2.4%), when it was released at the end of the month, reinforced the upward movement of rates which had begun at the start of the month. Rates in the United States moved in response to Donald Trump's victory, and German ten-year rates followed suit in part, especially with inflation in Germany continuing its upward trend in November and December. Activity in the euro zone on the other hand remained sluggish – except in Spain where the picture is brighter. The composite PMI index for Germany, France and Italy was below the 50 mark in the fourth quarter on average, with Spain achieving 55. In this environment of weak growth, the ECB reduced its key rate twice during the quarter to close the year at 3.15%. In all, the ten-year rate gained 30 bps over the quarter and 36 bps in 2024 as a whole. With long rates rising over the quarter, the break-up of the German government and difficulties passing the budget in France, the stock exchange lost 2.2% in the quarter, although thanks to the performance in Q1, growth was 6.8% for 2024 as a whole.

Notes concerning management

2024 was marked by a global wave of interest rate reductions as central banks gradually relaxed their monetary policy. Japan bucked the trend by increasing its rates for the first time in more than a decade.

In Europe, the rate reduction was gradual and informed by an economy showing signs of recession and inflation approaching the ECB's target.

In the United States, the Fed had to tread carefully, adjusting its policy according to the economic data.

The American economy has been remarkably resilient, with growth faster than forecast, a robust labour market and steady consumption.

In the face of these falling rates, inflation stayed around 3%, higher than in Europe and still above the Fed's 2% target.

A dose of uncertainty was injected when Donald Trump was elected, with the prospect of customs barriers potentially reawakening inflationary pressures.

Meanwhile, the Bank of Japan (BoJ) embarked upon monetary tightening, ending its long-lasting ultra-accommodative policy stance.

This decision caused the carry trade to collapse, halting the fall of the yen and prompting a spectacular crash in the equities markets, in Asia especially, and an outbreak of volatility in the equity and foreign exchange markets.

Past performance may not be a reliable guide to future performance.

Our exposure to stock exchange indices generated gains thanks to some strong trends, but this was not enough to make up for the losses on long rates. This segment was particularly volatile, with no clear direction and buffeted by often contradictory economic publications and shifting interest rate expectations among operators.

SFDR

CANDRIAM DIVERSIFIED FUTURES is classed under SFDR Article 6.

It does not systematically integrate ESG characteristics into its management framework. Nevertheless, sustainability risks are taken into account in investment decisions through Candriam's exclusion policy which excludes certain controversial activities.

Taxonomy

The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Broker and counterparty selection and evaluation procedure

Candriam selects intermediaries to which it sends orders for execution for the major classes of financial instruments (bonds, equities, derivative products). The selection is mainly based on the intermediary's execution policy and subject to the "Selection policy for financial intermediaries to which Candriam sends orders for execution on behalf of the UCIs it manages".

The main execution factors considered are: price, cost, speed, probability of execution and settlement, size and type of order.

In application of the broker and counterparty selection and evaluation procedure and at the request of the asset manager, Candriam's Broker Review approves or refuses any new broker application.

Therefore pursuant to this policy, a list by type of instruments (equities, interest rates, money market, derivatives) of the authorised brokers and a list of the authorised counterparties are kept.

Furthermore, on a periodic basis and as part of the Broker Review, the list of approved brokers is reviewed so as to evaluate them on the basis of various filters and make any appropriate and necessary changes.

Information relating to the remuneration policy

Directive 2014/91/EU amending Directive 2009/65/EC on undertakings for collective investment in transferable securities, which is applicable to the FCP, came into force on 18 March 2016. It was transposed into national law by the Luxembourg law of 10 May 2016 transposing Directive 2014/91/EU. Under the new arrangements, the FCP is required to publish in its annual report information about the remuneration of the employees identified by the law.

Candriam holds a double licence: as a management company in accordance with article 15 of the law of 17 December 2010 relating to undertakings for collective investment; and as an alternative investment fund manager in accordance with the law of 12 July 2013 on alternative investment fund managers. The responsibilities of Candriam under these two laws are quite similar and Candriam considers that its personnel is remunerated in the same way for tasks relating to the administration of UCITS and alternative investment funds.

During the financial year ended 31 December 2024, Candriam paid the following amounts to its personnel: Gross total amount of fixed remuneration paid (excluding payments or benefits which may be regarded as forming part of a general and non-discretionary policy and having no incentive effect on risk management): EUR 17,350,856.
Gross total amount of variable remuneration paid: EUR 7,728,914.
Number of beneficiaries: 144

Aggregate amount of remuneration, broken down by senior managers and members of the investment management personnel whose activities have a significant impact on the fund's risk profile. Candriam's systems do not allow identification of this kind for each managed fund. The figures below also present the aggregate amount of global remuneration in Candriam.

Aggregate amount of remuneration of senior management: EUR 4,166,282.

Aggregate amount of remuneration of Candriam personnel whose activities have a significant impact on the risk profile of the funds of which it is the Management Company (excluding senior managers): EUR 2,502,219.

Remuneration paid by Candriam to personnel in its branch in Belgium (i.e. Candriam – Belgian Branch) acting as financial managers, in the financial year ended 31 December 2024:

Gross total amount of fixed remuneration paid (excluding payments or benefits which may be regarded as forming part of a general and non-discretionary policy and having no incentive effect on risk management): EUR 25,405,396.

Gross total amount of variable remuneration paid: EUR 9,014,600.

Number of beneficiaries: 235.

Aggregate amount of remuneration, broken down by senior managers and members of the delegated financial management personnel whose activities have a significant impact on the fund's risk profile. The delegated financial manager's systems do not allow identification of this kind for each managed fund. The figures below also indicate the aggregate amount of global remuneration at the level of the delegated financial manager.

Aggregate amount of remuneration of senior management: EUR 5,578,123.

Aggregate amount of remuneration of the members of the delegated financial management personnel whose activities have a significant impact on the risk profile of the funds of which it is the delegated financial manager (excluding senior managers): EUR 6,127,306.

Remuneration paid by Candriam to personnel in its branch in France (i.e. Candriam – Succursale française) acting as financial managers, in the financial year ended 31 December 2024:

Gross total amount of fixed remuneration paid (excluding payments or benefits which may be regarded as forming part of a general and non-discretionary policy and having no incentive effect on risk management): EUR 19,852,462.

Gross total amount of variable remuneration paid: EUR 7,150,350.

Number of beneficiaries: 203.

Aggregate amount of remuneration, broken down by senior managers and members of the delegated financial management personnel whose activities have a significant impact on the fund's risk profile. The delegated financial manager's systems do not allow identification of this kind for each managed fund. The figures below also indicate the aggregate amount of global remuneration at the level of the delegated financial manager.

Aggregate amount of remuneration of senior management: EUR 3,393,861.

Aggregate amount of remuneration of the members of the delegated financial management personnel whose activities have a significant impact on the risk profile of the funds of which it is the delegated financial manager (excluding senior managers): EUR 4,350,853.

The remuneration policy was most recently revised by the remuneration committee of Candriam on 02 February 2024, and was adopted by the Board of Directors of Candriam.

Opinion

In carrying out the mandate entrusted to us by the management company, we carried out our audit of the annual accounts of the UCITS in the form of a *fonds commun de placement* (FCP) CANDRIAM DIVERSIFIED FUTURES for the financial year ended 31 December 2024, as appended to this report.

We certify that the annual financial statements are, in conformity with French accounting rules and principles, accurate and consistent, and give a true and fair view of the financial performance of the previous financial year as well as the financial situation and assets of the UCITS, in the form of a fonds commun de placement, at the end of this financial year.

Basis of the opinion

Audit criteria

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion. The responsibilities incumbent on us under these standards are set out in the section entitled "*Responsibilities of the auditors in the auditing of the annual accounts*" in this report.

Independence

We conducted our audit mandate in accordance with the rules of independence set out in the French Commercial Code and the Code of Ethics for Statutory Auditors, for the period 30/12/2023 to the date of issue of our report.

Observation

Without calling into question the opinion expressed above, we would draw your attention to the change in accounting methods referred to in the appendix to the annual accounts.

Justification of our appraisals

In application of the provisions of Articles L.821-53 and R.821-180 of the French Commercial Code relating to the justification of our appraisals, we hereby inform you that the appraisals which, in our professional opinion, were the most significant for the audit of the year's annual accounts, covered the appropriateness of the accounting principles applied, the reasonableness of the significant estimates made, and the overall presentation of the accounts.

These appraisals formed part of our audit of the annual accounts as a whole, and contributed to our opinion expressed above. We do not express an opinion on items in the annual accounts taken in isolation.

Specific verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by statutory and regulatory texts.

We have no observations to make on the fairness and consistency with the annual accounts of the information given in the management report prepared by the management company.

CANDRIAM DIVERSIFIED FUTURES

Responsibilities of the management company relating to the annual accounts

It is the responsibility of the management company to prepare annual accounts giving a true and fair view in accordance with French accounting rules and principles, and to implement the internal controls it considers necessary to enable the preparation of annual accounts that are free from material misstatement, whether due to fraud or error.

When preparing the annual accounts, it is the management company's responsibility to assess the fund's ability to continue as a going concern, to present in these accounts, where applicable, the necessary information relating to its viability as a going concern, and to apply the going concern accounting policy unless it intends to wind up the fund or to cease trading.

The annual accounts have been prepared by the management company.

Responsibilities of the auditors in the auditing of the annual accounts

Audit objective and approach

It is our responsibility to draft a report on the annual accounts. Our aim is to obtain reasonable assurance that the annual accounts taken as a whole do not contain any material misstatement. Reasonable assurance corresponds to a high level of assurance, but does not guarantee that an audit performed in accordance with the standards of professional practice can systematically detect any material misstatement. Misstatements may arise from fraud or error and are considered material where it can reasonably be expected that, taken individually or together, they may influence the economic decisions made by account users based thereon.

As specified by Article L.821-55 of the French Commercial Code, our mandate is to certify the accounts, not to guarantee the viability or the quality of the management of the fund.

Where an audit is conducted in accordance with the professional standards applicable in France, the statutory auditor exercises its professional judgement throughout this audit. In addition,

- it identifies and assesses the risks that the annual accounts may contain material misstatement (whether due to fraud or error), sets out and implements the audit procedures intended to counter these risks, and collates the items that it deems sufficient and appropriate to justify its opinion. The risk of non-detection of a material misstatement due to fraud is higher than that of a material misstatement due to an error, since fraud may involve collusion, forgery, voluntary omissions, misrepresentation or the circumvention of internal control processes;

*PricewaterhouseCoopers Audit, 63, rue de Villiers, 92208 Neuilly-sur-Seine Cedex

CANDRIAM DIVERSIFIED FUTURES

- it becomes familiar with the internal control processes relevant to the audit so as to set out audit procedures that are appropriate to the circumstances, and not to express an opinion on the effectiveness of the internal control processes;
- it assesses the appropriateness of the accounting policies used and the reasonableness of the accounting estimates made by management, as well as the information provided in their regard in the annual accounts;
- it assesses the appropriateness of the application by the management company of the going concern accounting policy and based on the evidence gathered, whether significant uncertainty exists relating to events or circumstances that may affect the fund's ability to continue as a going concern. This assessment is based on the items collated until the date of its report, on the understanding that subsequent events or circumstances may affect its viability as a going concern. If significant uncertainty is shown to exist, it draws the attention of the readers of its report to the information provided in the annual accounts in respect of said uncertainty or, if this information is not provided or is not relevant, it issues a certification with reserve or a refusal to certify;
- it appraises the overall presentation of the annual accounts, and assesses whether said statements reflect the transactions and underlying events, and thus provide a true and fair view thereof.

In accordance with the law, please note that we were unable to issue this report within the statutory periods because certain documents needed to complete our work were received late.

Only the French version of this annual report has been reviewed by the auditor. Consequently, the audit report refers only to the official English version of the annual report, while other translated versions have been prepared under the responsibility of the FCP's Board of Directors. In case of any discrepancies between the official English version and the translated versions, the official version shall prevail.

Appendices to the annual accounts

A. General information

A1. Characteristics and activity of the open-ended UCI

A1a. Management strategy and profile

Within the context of systematic investment, the fund's objective is to achieve an absolute performance net of all management fees exceeding the capitalised €STR index for euro denominated units, exceeding the capitalised SONIA index for GBP denominated units, exceeding the capitalised EFRR index for USD denominated units, exceeding the capitalised SONIA index for USD denominated units, and exceeding the capitalised SARON index for CHF denominated units, independent of trends on the international equities, interest rates, currencies and volatility markets by means of systematic quantitative strategies with an annualised target volatility of less than 12% under normal market conditions.

The prospectus/rules of the UCI describe these characteristics fully and accurately.

A1b. Characteristic elements of the UCI over the last five financial years

A2. Accounting rules and methods

The annual accounts are presented for the first time in the form stipulated in ANC regulation 2020-07, modified by regulation ANC 2022-03.

1 Changes to accounting methods including presentation in connection with the application of the new accounting regulation on the annual accounts of open-ended undertakings for collective investment (modified regulation ANC 2020-07)

This new regulation contains changes to accounting methods including differences in the way annual accounts are presented. As a result, they may not be comparable with the accounts of the previous financial year.

NB: the statements concerned are as follows (apart from the balance sheet and the income statement): B1. Change in equity capital and financing liabilities; D5a. Allocation of distributable income from net revenue and D5b. Allocation of distributable income from net realised capital gains and losses.

So in accordance with article 3(2) of regulation ANC 2020-07, the financial statements do not present the data of the previous financial year; the N-1 financial statements are contained in the appendix

These changes primarily affect:

- the balance sheet structure, which is now presented according to the types of eligible assets and liabilities, including lendings and borrowings,
- the income statement structure, which is fundamentally different. Specifically, the profit and loss account includes exchange rate spreads on financial accounts, latent capital gains or losses, realised capital gains or losses and transaction fees,
- removal of the off-balance sheet table (some of the information on the elements in this table are now contained in the appendices),
- removal of the option of recording fees included in the cost price (without retroactive effect for funds previously using the fee-inclusive method),
- a distinction between convertible bonds and other bonds, as well as their respective accounting records,
- a new classification of target funds in the portfolio according to the model: UCITS/AIF/Other,
- the recording of forward exchange commitments, which no longer takes place at the balance sheet level but at the off-balance sheet level, with a note about forward exchange covering a specific portion,
- notes added about direct and indirect exposures on the various markets,
- presentation of the inventory which now distinguishes between eligible assets and liabilities and forward financial instruments,
- adoption of a unique presentation model for all UCI types,
- removal of aggregation of accounts for funds with sub-funds.

2 Accounting rules and methods applied during the accounting financial year

General accounting principles are applicable (subject to the changes set out below):

- true and fair view, comparability, going concern,
- accuracy, reliability,
- prudence,
- consistency of accounting methods from one financial year to the next.

The accounting method for recording proceeds from fixed-income securities is the interest received method.

Entries and sales of securities are accounted exclusive of fees.

The reference currency for portfolio accounting is the euro.

The financial year is 12 months.

Asset valuation rules

Equities, warrants and rights

Equities are valued at the closing price on the various stock exchanges on the reference date.

ETFs and UCIs

ETFs and UCIs are valued at the net asset value representative of the markets on the reference date or in the absence thereof the preceding date.

Bonds

Bonds are valued at the closing price on the basis of contributor prices on the reference date.

Negotiable debt securities and other money market instruments

Negotiable debt securities are valued at the closing price on the basis of contributor prices on the reference date.

Futures and options on organised markets

These financial instruments are valued at the closing prices on the various futures markets on the reference date.

Cleared OTC derivatives

Cleared OTC products are calculated based on models validated by the Management Company, using market data such as interest rate curves, spread curves, etc., available from specialised data providers. The prices obtained from the models are compared with those of the CCP.

Spot exchange rates

The spot exchange rates are valued from the market data available from specialised data providers.

Forward exchange

Forward exchange is valued on the basis of the market data available from specialised data providers (spot price, rate curve, etc.).

Credit derivatives

Uncleared credit derivatives are calculated based on models validated by the Management Company, using market data such as the spread curve, interest rate curve, etc., available from specialised data providers. The prices obtained are compared with those of the counterparties.

Rate swaps

Uncleared interest rate swaps are calculated based on models validated by the Management Company, using market data such as the interest rate curve, etc., available from specialised data providers. The prices obtained are compared with those of the counterparties.

Other OTC derivatives

Uncleared OTC products are calculated based on models validated by the Management Company, using the market data available from specialised data providers (volatility, interest rate curve, etc.).
The prices obtained from the models are compared with those of the counterparties.

Repurchase and reverse repurchase agreements, lending and borrowing of securities

Repurchase agreements, reverse repurchase agreements and securities borrowing/lending are valued at cost plus interest. For contracts exceeding three months, the credit spread of the counterparty may be revalued.

Exceptional treatment

Debt securities in which there are not significant amounts of transactions or for which the price is clearly not representative of the market may be valued on the basis of an estimated method and under the responsibility of the Management Company. In addition, the actuarial method may be used, the rate applied being that for issues of equivalent securities, where applicable, allocated by a differential representative of the intrinsic characteristics of the issuer of the security.
Options in which there are not significant amounts of transactions and/or for which the price is clearly not representative of the market may be valued on the basis of a method representative of the close of the market at responsibility of the Management Company.

Off-balance sheet items:

The off-balance sheet commitment relating to interest rate or currency swaps corresponds to the contract nominal. The off-balance sheet commitment on French and foreign futures markets is calculated based on the regulations in force:
- Outright forward transaction: quantity by nominal amount by the day's price at the day's currency rate.

Main sources

The principal specialised data providers for valuations are Bloomberg, IDC, CMA, WMC and Factset.
The Management Company may, nevertheless, change these at its own responsibility if it deems appropriate.

Direct exposure to the credit markets: principles and rules used for the breakdown of elements of the UCI portfolio (table C1f.) :

All the elements of the UCI portfolio with direct exposure to the credit markets are contained in this table.
For each element, the issue's rating is obtained from three rating agencies.

Next, the rule determining which rating is applied is: the second-best rating.

If no rating is available for the issue, the element will be considered to be "Unrated".

Finally, the element is categorised according to the rating applied, using the market standards defining the notions "Investment grade" and "Non-investment grade"

Management fees

These cover all the costs billed directly to the UCITS apart from the transaction charges. Transaction charges include intermediary charges (brokerage, stock exchange duties, etc.) and any turnover fees, where applicable, which may be collected in particular by the depositary and the Management Company.

In addition to the operating and management charges, there may be:

- Outperformance fees. These are paid to the Management Company if the UCITS outperforms its objectives: They are therefore billed to the UCITS,
- Transfer fees billed to the UCITS.

Charges billed to the FCP	Calculation basis	Rate/amount incl. taxes
Financial management charges and administration charges external to the Management Company	Net assets	Classique Unit: 1.70% maximum* I in GBP units, I in USD units, I in CHF units, I in EUR units: 1.20% maximum * N Unit 2.00% maximum * U Unit 1.20% maximum * R Unit 1.20% maximum * Z Unit 0.25% maximum *
Maximum indirect charges (fees and management charges)	Net assets	Not significant **
Turnover fees collected by the depositary	Levied on each transaction	Maximum of EUR 80 per transaction ***
Outperformance fee	Net assets	- Classique, I, N, U, R and Z units, denominated in EUR: 20% of performance above the capitalised €STR* consisting of a high water mark and a hurdle (see below) - I in GBP units: 20% of any performance over and above that of the capitalised SONIA* - I in USD units: 20% of any performance over and above that of capitalised EFR* - I in CHF units: 20% of any performance over and above that of capitalised SARON*

*Since the Management Company has opted out of VAT, these fees are charged excluding VAT and their amount including taxes is equal to their amount excluding taxes.

** The fund invests a maximum of 10% in UCIs.

*** Maximum amount that varies according to the instruments used.

Outperformance fee:

For each unit category, the asset manager may be entitled to an outperformance fee based on the Outperformance of the net asset value (NAV) in relation to the reference indicator defined below.

Unit	Cap. / Dis.	Currency	ISIN	Outperformance fee	Provisioning rate	Minimum return rate	Model applied
Classique	Cap.	EUR	FR0010794792	Yes	20%	Capitalised €STR, floored 0	Permanent HWM
I	Cap.	EUR	FR0010813105	Yes	20%	Capitalised €STR, floored 0	Permanent HWM
I in GBP	Cap.	GBP	FR0013201894	Yes	20%	Capitalised SONIA, floored 0	Permanent HWM
I in USD	Cap.	USD	FR0013446341	Yes	20%	Capitalised EFFR, floored 0	Permanent HWM
I in CHF	Cap.	CHF	FR001400MA65	Yes	20%	Capitalised SARON, floored 0	Permanent HWM
N	Cap.	EUR	FR0013202835	Yes	20%	Capitalised €STR, floored 0	Permanent HWM
U	Cap.	EUR	FR0013201886	Yes	20%	Capitalised €STR, floored 0	Permanent HWM
R	Cap	EUR	FR0013305190	Yes	20%	Capitalised €STR, floored 0	Permanent HWM
Z	Cap.	EUR	FR0013245081	Yes	20%	Capitalised €STR, floored 0	Permanent HWM

Benchmark index

The reference indicator is made up of the two following elements:

- A high water mark (HWM) corresponding to a first reference asset based on the highest NAV achieved at the end of a financial year from 31/12/2021.

The initial HWM corresponds to the NAV of 31/12/2021. If a new unit category is activated subsequently or a pre-existing unit category is reactivated, the initial NAV of this new class at (re)launch will be used as the initial HWM.

- A hurdle corresponding to a second reference asset based on a theoretical investment of assets at the minimum rate of return which increases the subscription totals and proportionally reduces the redemption totals. If this minimum rate of return is negative, the rate of 0% is used to determine the hurdle rate.

Using a HWM guarantees that unitholders will not be billed for an outperformance fee while the NAV remains below the highest NAV achieved at the end of a financial year from 31/12/2021.

This variable remuneration aligns the interests of the asset manager with those of the investors and is a link with the FCP's risk/return ratio.

Method for calculating the outperformance fee

As the NAV is different for each unit category, the outperformance fees are calculated independently for each unit, producing fees of different amounts.

The outperformance fee is calculated with the same frequency as the NAV calculation.

The outperformance fee is included in the NAV calculation.

If the NAV upon which fee calculation is based, in other words the NAV after the outperformance fee on redemptions but excluding the outperformance fee on units still in circulation, is greater than the two components of the reference indicator (HWM and hurdle), this constitutes an outperformance.

The smaller of these 2 outperformances is the basis of calculation for the provision for an outperformance fee in line with the provisioning rate of this outperformance as set out in the table below (the "Provisioning rate").

In the event of underperformance in relation to one of the two components of the reference indicator, the outperformance fee is reversed in line with the provisioning rate of this underperformance. Nevertheless, the accounting provision for the outperformance fee will never be negative.

When a dilution adjustment is applied to the NAV, it is excluded from the outperformance fee calculation.

In the case of a unit category with distribution rights, any distributions of dividends will have no effect on the outperformance fee of the unit category.

For each unit category denominated in the currency of the fund, outperformance fees are calculated in this currency, whereas for unit categories denominated in another currency, whether or not they are currency hedged, the outperformance fees will be calculated in the currency of the unit category.

Reference period

In general, the outperformance fee is calculated for each 12 month period corresponding to the financial year. This period is regarded as the reference period for calculation of the outperformance fee.

In the case of activation or reactivation of a unit category, the first crystallisation of performance fees for this unit category cannot take place (apart from redemptions) until the end of the financial year following the financial year during which the unit category was (re)activated.

Crystallisation

Any positive outperformance fee is crystallised:

- at the end of each reference period,
- at the time of each net redemption identified on each NAV calculation, in proportion to the number of units redeemed. In this case, the outperformance fee provision will be reduced by the amount crystallised in this way,
- if applicable, on the closing date of a unit category during the reference period.

In addition, and in accordance with the rules, an outperformance fee may be crystallised:

- in the event of merger/liquidation of the fund/unit category during the reference period,
- if the outperformance mechanism changes.

Clawback of negative performances

In the event of negative performance during the reference period, the underperformance will be carried over to the following reference period. The HWM will in this case remain identical to that of the previous period.

As for the hurdle, it is reinitialised at the start of each period regardless of whether an outperformance fee has been crystallised or not

Allocation of distributable income

Definition of distributable income

The distributable income consists of:

Revenue:

The revenue plus retained earnings, plus or minus the balance of the revenue adjustment account.

Capital gains and losses:

The realised capital gains, net of costs, less any realised capital losses, net of charges, recorded during the financial year, plus any net capital gains of the same nature recognised over previous financial years which were not distributed or capitalised, plus or minus the capital gains adjustment account.

The amounts mentioned in "revenue" and "capital gains and losses" may be distributed in whole or in part independently of each other.

Distributable amounts are paid within a maximum period of five months after the end of the financial year. When the UCI is authorised in accordance with Regulation (EU) 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, notwithstanding the provisions of I, the distributable amounts may also include latent capital gains

APPENDICES TO THE ANNUAL ACCOUNTS

1. Accounting rules and methods

The annual accounts are submitted in the form stipulated in Regulation ANC 2014-01, as amended.

General accounting principles are applicable:

- true and fair view, comparability, going concern,
- accuracy, reliability,
- prudence,
- consistency of accounting methods from one financial year to the next.

The accounting method for recording proceeds from fixed-income securities is the interest received method.

Entries and sales of securities are accounted exclusive of fees.

The reference currency for portfolio accounting is the euro.

The financial year is 12 months.

Asset valuation rules

Equities, warrants and rights

Equities are valued at the closing price on the various stock exchanges on the reference date.

ETFs and UCIs

ETFs and UCIs are valued at the net asset value representative of the markets on the reference date or in the absence thereof the preceding date.

Bonds

Bonds are valued at the closing price on the basis of contributor prices on the reference date.

Negotiable debt securities and other money market instruments

Negotiable debt securities and other money market instruments are valued using prices calculated on the basis of representative market data on the reference date.

Futures and options on organised markets

These financial instruments are valued at the closing prices on the various futures markets on the reference date.

Cleared OTC derivatives

These financial instruments are valued at the closing prices set by the clearing houses on the reference date.

Spot exchange rates

The spot exchange rates are valued from the market data available from specialised data providers.

Forward exchange

Forward exchange is valued on the basis of the market data available from specialised data providers (spot price, rate curve, etc.).

Credit derivatives

Uncleared credit derivatives are calculated based on models validated by the Management Company, using market data such as the spread curve, interest rate curve, etc., available from specialised data providers. The prices obtained are compared with those of the counterparties.

Rate swaps

Uncleared interest rate swaps are calculated based on models validated by the Management Company, using market data such as the interest rate curve, etc., available from specialised data providers. The prices obtained are compared with those of the counterparties.

Other OTC derivatives

Uncleared OTC products are calculated based on models validated by the Management Company, using the market data available from specialised data providers (volatility, interest rate curve, etc.). The prices obtained from the models are compared with those of the counterparties.

Repurchase and reverse repurchase agreements, lending and borrowing of securities

Repurchase agreements, reverse repurchase agreements and securities borrowing/lending are valued at cost plus interest.

For contracts exceeding three months, the credit spread of the counterparty may be revalued.

Exceptional treatment

Debt securities in which there are not significant amounts of transactions or for which the price is clearly not representative of the market, may be valued on the basis of an estimated method and under the responsibility of the Management Company. In addition, the actuarial method may be used, the rate applied being that for issues of equivalent securities, where applicable, allocated by a differential representative of the intrinsic characteristics of the issuer of the security.

Options in which there are not significant amounts of transactions and/or for which the price is clearly not representative of the market, may be valued on the basis of a method representative of the close of the market at responsibility of the Management Company.

Off-balance sheet items:

The off-balance sheet commitment relating to interest rate and currency swaps corresponds to the nominal contract value.

The off-balance sheet commitment on French and foreign futures markets is calculated based on the regulations in force:

- Outright forward transaction: quantity by nominal amount by the day's price at the day's currency rate.

Main sources

The principal specialised data providers for valuations are Bloomberg, IDC, CMA, WMC and Factset.

The Management Company may, nevertheless, change these at its own responsibility if it deems appropriate.

Management fees

These cover all the costs billed directly to the UCITS apart from the transaction fees. Transaction charges include intermediary charges (brokerage, stock exchange duties, etc.) and any turnover fees, where applicable, which may be collected in particular by the depositary and the Management Company.

In addition to the operating and management fees, there may be:

- Outperformance fees. These are paid to the Management Company if the UCITS outperforms its objectives. They are therefore billed to the UCITS,
- Transfer fees billed to the UCITS;
-

Charges billed to the FCP	Calculation basis	Rate/amount incl. taxes
Financial management charges and administration charges external to the Management Company	Net assets	Classique Unit: 1.70% maximum* I in GBP Unit, I in USD Unit: 1.20% maximum * N Unit 2.00% maximum * U Unit 1.20% maximum * R Unit 1.20% maximum * Z Unit 0.25% maximum *
Maximum indirect charges (fees and management charges)	Net assets	Not significant **
Turnover fees collected by the depositary	Levied on each transaction	Maximum EUR 80/transaction***
Outperformance fee	Net assets	-Classique, I, N, U, R and Z Units, denominated in EUR: 20% of performance above the capitalised €STR* consisting of a high water mark and a hurdle (see below) -I in GBP Unit: 20% of any performance over and above that of the capitalised SONIA* -I in USD Unit: 20% of any performance over and above that of capitalised EFR*

*Since the Management Company has opted out of VAT, these fees are charged excluding VAT and their amount including taxes is equal to their amount excluding taxes.

** The fund invests a maximum of 10% in UCIs.

*** Maximum amount that varies according to the instruments used.

Method for calculating the outperformance fee

As the NAV is different for each unit category, the outperformance fees are calculated independently for each unit, producing fees of different amounts.

The outperformance fee is calculated with the same frequency as the NAV calculation. The outperformance fee is included in the NAV calculation.

If the NAV upon which fee calculation is based, in other words the NAV after the outperformance fee on redemptions but excluding the outperformance fee on units still in circulation, is greater than the two components of the reference indicator (HWM and hurdle), this constitutes an outperformance.

The smaller of these 2 outperformances is the basis of calculation for the provision for an outperformance fee in line with the provisioning rate of this outperformance as set out in the table below (the "Provisioning rate").

In the event of underperformance in relation to one of the 2 components of the reference indicator, the outperformance fee is reversed in line with the provisioning rate of this underperformance. Nevertheless, the accounting provision for the outperformance fee will never be negative.

When a dilution adjustment is applied to the NAV, it is excluded from the outperformance fee calculation.

In the case of a unit category with distribution rights, any distributions of dividends will have no effect on the outperformance fee of the unit category.

For each unit category denominated in the currency of the fund, outperformance fees are calculated in this currency, whereas for unit categories denominated in another currency, whether or not they are currency hedged, the outperformance fees will be calculated in the currency of the unit category.

Reference period

In general, the outperformance fee is calculated for each 12 month period corresponding to the financial year. This period is regarded as the reference period for calculation of the outperformance fee.

In the case of activation or reactivation of a unit category, the first crystallisation of performance fees for this unit category cannot take place (apart from redemptions) until the end of the financial year following the financial year during which the unit category was (re)activated.

Crystallisation

Any positive outperformance fee is crystallised:

- at the end of each reference period,
- at the time of each net redemption identified on each NAV calculation, in proportion to the number of units redeemed. In this case, the outperformance fee provision will be reduced by the amount crystallised in this way,
- if applicable, on the closing date of a unit category during the reference period.

In addition, and in accordance with the rules, an outperformance fee may be crystallised:

- in the event of merger/liquidation of the fund/unit category during the reference period,
- if the outperformance mechanism changes.

Clawback of negative performances

In the event of negative performance during the reference period, the underperformance will be carried over to the following reference period. The HWM will in this case remain identical to that of the previous period.

As for the hurdle, it is reinitialised at the start of each period regardless of whether an outperformance fee has been crystallised or not.

Allocation of distributable income

Definition of distributable income

The distributable income consists of:

Profit:

The net income plus retained earnings, plus or minus the revenue adjustment balance. The net income for the financial year is equal to the amount of interest, arrears, dividends, premiums and prizes, remuneration and all proceeds generated by the securities held in the portfolio of the UCI, plus income generated by temporary cash holdings, less management charges and borrowing costs.

Capital gains and losses:

The realised capital gains, net of costs, less any realised capital losses, net of charges, recorded during the financial year, plus any net capital gains of the same nature recognised over previous financial years which were not distributed or capitalised, plus or minus the capital gains adjustment account.

Methods for allocation of distributable amounts:
